Spotify Executive Team
April 2026

CONFIDENTIAL

Executive Summary

Business Problem

- Inefficient strategies to determine tour stops
- Emphasis on quantity/volume analytics masks disparities in fan retention
- Redirecting capital from saturated hubs to high-retention markets

Objectives

- Identify cities with most loyal fanbase
- Reallocate funds toward these cities, ensuring predictable revenue floor

Takeaway

- Prioritization of loyal fans to maximize tour revenue

Volume Metrics Mask Critical Audience Friction

Inverse Relationship Between Market Scale and Fan Engagement Exists

- **Inverse Relationship:** As total streams increase, save rates tend to slightly decrease
- Total streams alone are a misleading indicator of where to tour

CONFIDENTIAL

Lower Skip Rates Signal Stronger Loyalty

Skip Rates Vary Across Major Global Cities

High Repeat Fan Ratios Reveal Loyal Global Tour Markets

Repeat Fan Ratio (% of Returning Monthly Listeners) Reveals Top Tour Markets

- Cities with higher repeat fan ratios show deeper fan loyalty than markets driven only by one-time listeners
- Prioritizing these cities helps Spotify guide tours toward stronger sellout and revenue opportunities

CONFIDENTIAL

Recommendation: Spotify Tour Intelligence

Strengths

- Existing Spotify for Artists Integration
- Proprietary fan behavior data
- Immediate distribution to artist

Opportunities

- Enter tour-planning workflow
- Deepen artist platform reliance
- New monetization features

- Launch fan depth analytics tool
- Rank cities by engagement, not only size
- Embed in Spotify for artists

Potential Upsides:

- Successful tours increase streams/ads/listener activity.
 - Artist Retention → Platform Growth
- Partnership revenue from ticketing/promoters/labels.

Timeline

Model development

Build and test market scoring model identifying strongest tour locations based on loyalty signals.

0-3 Months

3-6 Months

Pilot with artists

Launch beta dashboard with select artists/teams to validate recommendations and refine insights

Full Rollout

Release dashboard broadly with live city rankings, planning tools, and tour market recommendations.

6-9 Months

Primary Risks

Risks

- Interferes with existing touring decision-makers
- Unsuccessful tours may be blamed on spotify
- Ignores factors like pricing, timing, local events, and logistics

Strategies

- Propose this as a decision-support tool, not a replacement
- Provide multiple recommended markets with uncertainty ranges
- Incorporate external data partnerships (ticketing, events, pricing)

Closing: Better Fans, Better Tours

Core Takeaway:

- Volume does not equal loyalty
- Engagement drives real demand

Why Spotify:

- Unique data + direct artist access

Recommendation:

- Launch Tour Intelligence
- Rank cities by fan depth

Appendix A

Global Venue Alignment: High Listener Density Justifies Stadium-Scale Touring in Key Hubs

- Identify which cities can support larger venues versus markets better suited for smaller stops.
- High-listener cities support stadium-scale bookings, strengthening Spotify's planning accuracy by targeting markets that can fill the largest venues.

Appendix B

External Reach and Editorial Playlists Dominate the Listener Funnel

- Radio/External and Editorial playlists drive most audience reach through broad exposure
- Smaller search and algorithm channels offer growth in loyal fan conversion
 - Reach through daily mix/discover weekly implies regular engagement with artist

Appendix C: Q&A Possibilities

1. Why should Spotify focus on loyalty instead of total streams when planning tours?

- Streams measure reach, not commitment.
- Loyal fans are more likely to buy tickets and merch.
- Fan depth is a stronger indicator of real tour demand.

2. How would this dashboard create value for Spotify?

- Makes Spotify a strategic partner, not just a streaming app.
- Strengthens artist retention and platform reliance.
- Creates future monetization through analytics tools.

3. How do you know your recommendations would lead to better tour outcomes?

- Uses multiple engagement signals, not one metric.
- Loyal markets are more likely to sell out venues.
- Improves revenue predictability over size-only decisions.

Appendix D: SWOT Analysis

Strengths • Proprietary listener data reveals loyalty beyond raw stream counts. • Existing Spotify for Artists platform enables fast rollout.	Weaknesses • Fan data alone cannot capture pricing, timing, or logistics. • Recommendations may face skepticism from managers and promoters.
Opportunities • Monetize premium tour-planning analytics for artists and labels. • Increase artist reliance by guiding profitable market selection.	Threats • Competitors or ticketing firms may launch similar tools. • Poor tour outcomes could create trust or brand risk for Spotify.
